Goals and Objectives

As an educator, I want the lesson to be realistic and current. Teaching about stock X, Y and Z from the textbook is very boring to the students. They are curious and would like to know the basics of investing. There are many formulas in the textbook so this project can be made more simplistic or more advanced. I focused on letting the students pick 10 stocks, track them for two weeks and do some basic computations. They had to compute net change for each day and at the end of two weeks compute percent of increase or decrease. After their research, they had to declare if they would or would not buy a particular stock. Much to our surprise, they learned how disasters of sorts caused the stock market or certain companies to have their stock take a dip due to current events.

After they learned what the Dow Jones was, what does Boeing do, what is a Max 8 aircraft and how many crashed with no survivors, they saw the impact in the market. It was a teachable moment as so many students were shocked that their peers did not follow global, national, regional, or local news. They only followed their own social media. This was a goal as well, to make the students aware that a company can fail for many reasons. It can be mother nature, a disaster, a political event and not just bad management. They also realized there is more going on than just their own social media.

They became engaged with each other, other teachers and their parents during this project. They asked everyone who had what stock and if they were successful and gaining financial wealth. I learned that our Business Teacher had stock in Disney as her parents bought it for her as a gift. I had one stock, I inherited from a grandfather. It was a very exciting time of the year. Instead of scolding the students to put their phones away, I knew finally that we were looking at something educational. It was the news or the market.

We completed the assignments in the text to master how to read a stock bar chart, a stock candlestick chart and how to study the data over time.

I left the presentation part up to the students. If they struggled, I allowed some handwritten projects. Others used charts, tables and some used excel. They used scientific calculators and checked their data with what they found online as well.

Since this was time consuming it was worth three grades. The first grade was the research part of the project. They had to report the open and close price of 10 stocks for two weeks. The second grade was the mathematics calculation section. They had to compute net change each day for all 10 stocks and the percent of increase or decrease of stock at the end of the two week period.

The third grade required some analysis on their part. They had to pick a particular stock, research the company, evaluate their data and tell me whether or not they would purchase that stock and why. This made them make a decision what to do with their money. Although we had no real investment we had real time data and facts.

Several students asked me to type a worksheet with directions although we had gone over several examples. I called it Stock Market Project Directions. In addition to several talented students, I had students who struggled as they were different levels of ESOL or SPED disorders. They were able to assist each other as I was able to help individuals as needed.

Florida Standards

MAFS.912.A-CED.1.1: Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and quadratic functions, and simple rational absolute, and exponential functions.

MAFS.912.A-CED. 1.4: Rearrange formulas to highlight a quality of interest, using the same reasoning as in solving equations.

MAFS.912.A-REI.1.1: Explain each step in solving a simple equation as following the equality of numbers asserted at the previous step, stating from the assumption that the original equation has a solution. Construct a viable argument to justify a solution method.

MAFS.912.A-REI-1.2: Solve simple and rational and radical equations in one variable, and give examples showing how extraneous solutions may arise.

MAFS.912.F-IF.2.4: For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities and sketch graphs showing key features given a verbal description of the relationship. Key features include: intervals where the function is increasing, decreasing, positive or negative; relative maximums and minimums; symmetries, end behavior, and periodicity.

Lesson Plans and Step By Step Guide for Implementing

Read the money section from the local newspaper. Go to the Stockmarket pages in that section. I spent an entire class period reading them abbreviations for stocks and then divulging their names. We discussed many companies they had never heard of and of course the ones that they knew. We looked at the graphs, the opening prices, and the closing prices from the year before. We discussed how JC Penney had higher yearly increase than Amazon and Nike and why that could exist. This was informative, an eye-opener and a brain storming session with facts from the newspaper.

We completed the first three sections in our textbook on the Stock Market. This included reading the candlestick graph, computing net change, percent of increase and percent of decrease along with other calculations.

The students were shown how to access the Stock app by swiping to the left on their iPhone and how to download the free stock app on their Samsung phones. I explained that in the next few days they would have to pick 10 stocks to track for two weeks. They were allowed to pick some popular ones and to find a few unusual ones. Of course they picked, Amazon, google, tesla, nike and other well known brands. Others picked car manufacturers, precious metals, Boeing, cell phone carriers. They discovered that not every company has stock.

I gave them blank copy paper, a ruler and told them to write their 10 companies and abbreviations in a column. Then in the corresponding rows they would record the open and closing price of each stock for two weeks. They discovered that some are closed on the weekends.

In part two, they had to calculate the net change which is the closing price minus the closing price for each day. At the end of the two weeks they had to calculate the percent of increase or percent of decrease.

In part three, they had to look at their data and see what peaked their interest the most. They had to do some research and reading about one of the companies that they chose. They had to select that one company and say why they would buy that stock or not buy that stock. I shared that I wish I had purchased 100 shares on Amazon a year ago, the last time I taught the lesson as I would have made a profit of more than 70,000. We also discussed conservative investors vs. risky investors or investments and how long you will keep your stock.

I provided a guideline for them to follow even though we many examples and reviewed many calculations. I will include the Stock Market Directions for Students on the Following page. This can be simplified or made more difficult by increasing the number of stocks, the amount time to track them, the number and type of calculations you want them to perform. They used a scientific calculator and some used excel.

Each day for two weeks we read the newspaper money section and checked the stocks, we also discussed how current events or tragedies had effected some companies and their stock.

Directions for Students

Stock Market Project

Part 1

Prepare a table with copy paper and ruler or use EXCEL if you know how. List 10 stocks with their name and abbreviation. Organize the date and list the open and close price for each day for 14 consecutive dates. Start with March 15, 2019

Part 2

Calculate the net change each stock for each day. Our textbook suggests Close-Close.

Also, calculate the Percent of Increase or Percent of Decrease over the two week frame for each stock. You have to complete this one time for each stock. So 10 calculations and state whether it is a percent on increase or percent of decrease. Were you making \$ or losing \$.

Page 3

Pick the most interesting stock on your first page. Complete research about this stock/ company. Attach the research and write a short summary on whether or not you would actually invest in this company or not.

Although, it is not required, look at current events like the two plane crashes and how it affected Boeing and certain airlines and the market. Also, regarding the tragedy in New Zealand would it affect FB stock? This was a shooting that was posted online before it was taken down. These are interesting issues to research such as what factors affect the value or loss of value of a particular stock.

Use our textbook p. 472 ex 4 as a model to calculate the Percent of Increase

Resources

Students used their cell phones. Many had iPhones and a few had Samsung cell phones. Only one student used her tablet in class and one used her Apple laptop (Mac).

The students had been trained and required to bring their own portable chargers (back up batteries) for their cell phones as the classroom I was assigned only had two working outlets. They nicely shared their back up chargers (portable batteries) with each other.

I supplied blank copy paper if they needed it. I obtained a few reams from the Ed. Fund Ocean Bank warehouse therefore it was no cost to me. You can buy a cheap ream of copy paper at Walmart for \$5.

I have a box 30 rulers in my classroom. I obtained these several years ago at the Ed. Fund Ocean Bank warehouse. You can purchase 30 rulers for approximately \$30 or less.

I paid for the Sun Sentinel newspaper which was delivered to my home which costs me \$38.92 for 6 months. You may be able to use any newspaper which is delivered to your school already and that you can share with another teacher. You can also just buy the newspaper for the 1 month you are working on this unit. I had to use the newspaper as I did not have a Promethean board or smart board in my classroom for the entire year. I could not pull up graphs, data and discuss as a large group for basic understanding at the beginning of the project.

I used the textbook assigned for the Financial Algebra course in MDCPS for a framework and reference for two formulas used and basic vocabulary in the unit.

I easily located the Florida Standards for my project from the Pacing Guides in the Financial Algebra course under the 4th 9 weeks.

I used the app on my iPhone which is preloaded in my iPhone called Stocks. If you swipe to the left it appears. The students that had Samsung phones were told to go to the app store and download the free app called Stocks. They were able to easily do this in minutes.

The students needed to be able to print the project either printed at home or in our media center for 5 cents per page. I did not print their projects for them.

A few websites that the students discovered and liked to use were: marketwatch.com, finance.com, and investopedia. After they were further along in the project they researched websites of individual companies.

This year my guest speaker was a banker who discussed how to get approved for a commercial business loan. However, in the past I had a stock broker who spent the entire teaching the basics of the stock market. I acquired these guest speakers as part of the Teach-A-Thon program with the Ed. Fund. You could invite a stock broker to be your guest speaker as long as they are approved by the school district in advance.

I will include sample projects, and photos from last year. The students and their parents signed a video release to be photographed.

I did not plan a field trip although I am sure a field trip to a bank that has investment options would be very easy to tackle.

Tips for the nervous investor

How to manage risk if you fear market crashes

By Robert Arnott, CEO

Investing in the stock market is the smart way to grow your money. But you should understand the risks involved. Here are some tips to help you manage risk.

That's what investors want: the possibility of a stock market crash. A period of time when stock prices plummet. Many people invest in a way that allows them to weather market downturns. They invest in a way that allows them to weather market downturns. They invest in a way that allows them to weather market downturns.

But the biggest risk of a stock market crash is not the loss of money. It's the loss of confidence. When the market crashes, investors lose confidence in the market. This is why it's important to have a long-term investment strategy.

Investors who have been in the market for a long time know that there have been times when the market has crashed. But they have also seen the market recover. This is why it's important to have a long-term investment strategy.

Investors who have been in the market for a long time know that there have been times when the market has crashed. But they have also seen the market recover. This is why it's important to have a long-term investment strategy.

Most interesting stock

My most interesting stock was Disney (DIS). This stock was interesting because it's a big company and one would think that it would do good but it went down from the first time I started to watch it.

The Walt Disney Co. is a diversified international family entertainment and media enterprise. It operates through the following segments: Media Networks, Parks & Resorts, Studio Entertainment and Consumer Products & Interactive Media. The Media Networks segment includes cable and broadcast television networks, television production and distribution operations, domestic television stations, radio networks and stations. The Parks and Resorts segment owns and operates the Walt Disney World Resort in Florida; the Disneyland Resort in California; Aulani, a Disney Resort & Spa in Hawaii; the Disney Vacation Club; the Disney Cruise Line; and Adventures by Disney. The Studio Entertainment segment produces and acquires live-action and animated motion pictures, direct-to-video content, musical recordings and live stage plays. This segment distributes films primarily under the Walt Disney Pictures, Pixar, Marvel, Lucasfilm and Touchstone banners.

<https://www.marketwatch.com/investing/stock/dis/profile>

In the end, I would invest in Disney because like everything it has its up and downs. I believe that during the summer and school breaks, this stock will increase.

Summary:

Considering all of the ten stocks I chose to study for the past two weeks in my opinion the ,most interesting stock that I would consider investing is Wayfair (W). The Wayfair stock company the seller of furniture and household goods has several extreme pros and cons. Out of each of the ten stocks listed above Wayfair (W) had an increase of 7.34% in the past two weeks. The biggest pro for the company has been sales growth in percentage. Over the last three years the company has been able to grow at a rate of 44% and by 42% in the third quarter. Way fair is expected to lose 1.28 per share for the fourth quarter of 2018 on revenue of \$1.97 billion.

Winner

Logitech was co-founded in Apples, Vaud, Switzerland, in 1981 by two Stanford alumni, Daniel Borel and Pierluigi Zappacosta, and a former Olivetti engineer, Giacomo Marini.

The name Logitech is derived from the French word for software, "logiciel".

Products	Peripherals
Revenue	▲ US\$2.57 billion (2018)
Net income	▲ US\$74 million (2014)
Total assets	▲ US\$1.5 billion (2013)
Total equity	▲ US\$0.7 billion (2013)
Number of employees	~7000 (2018)
Subsidiaries	3Dconnexion Blue Microphones (pending) Jaybird Mirial s.u.r.l. SightSpeed Slim Devices Ultimate Ears
Website	www.logitech.com

In my personal opinion after tracking Logitech stocks for two weeks plus the research on the company itself I can safely say it is a solid choice to invest in and purchase stocks, recently doing better than recent years due to the surge of technology and the demand for the product in everyday homes.

AMAZON

Amazon, the shopping website that started as a book store has proven to be a dynamic company that managed to conquer the world through time and the evolution of its different services.

According to an analysis by the firm *ve per mos (Bx+)* the strategy to diversify is evident in its actions in 2017. The price of these obtained a 65% increase against the S and P 500 index, which had a 19% increase.

For that reason, Amazon is one of the most attractive options to invest in 2018 according to the Analysts Firm.

It is very good to invest in Amazon because Amazon in a period of two weeks only lost 0.13% in the stock market.

In the process of watching 10 different market stocks, never did I expect a market to have better stock than Amazon, and I was correct. I would definitely put money in Amazon. Watching their stocks each and every day proved to me that Amazon is a very reliable and trustworthy company to put money in. Never in these 14 days did their stock drop drastically. Amazon was founded in 1994 by Jeff Bezos. He gave it the name Amazon because he wanted to give the company a name that started with an 'A' and he wanted it to be unique. When it was first launched in 1995, it only sold books, but now it is the largest e-commerce marketplace in the world.
